## Semantic Analysis of the Reddit Hivemind

We parsed every comment posted to Reddit in 2015 and 2019, and trained different word2vec models for each year. A lot's happened over the last four years, so many words, people or events have different associations. You can also try searching for a phrase that's more than the sum of its parts to see what the model thinks it means. Try your favourite band, slang words, technical things, or something totally random.
